

Work Experience

Backend Engineer at Mentora (2024-present)

I work as a backend engineer at a professional coaching and productivity platform, which includes responsibilities such as:

- Developed a real-time AI chatbot service with Python, deployed using AWS Lambda, storing chat data in DynamoDB, and using separate vector databases to manage user memories and enrich the conversation experience.
- Created HTTP endpoints and data models via Django to allow users to keep track of their coaching sessions and classes, review performance metrics, schedule learning activities, request anonymous feedback, and so on.
- Created features and automations to ensure internal team members could easily administrate the platform, working along with other areas to ensure customer success.

Software and Machine Learning Engineer at Accusense (2022-2024)

I was a software and machine learning engineer at Accusense, a business intelligence and consulting company.

- Developed a document and media processing platform using the PHP Laravel framework, allowing analysts to process data from our clients and generate reports.
- Implemented ETL pipelines with AWS SQS to identify key information from company documents, marketing campaigns and other media, using Python paired with techniques such as NLP, OCR, Bayesian Inference, and more.

Game developer and manager at USPGameDev (2017-2024)

I was an active member and part of the main organization and managing team of my university's game development extracurricular group.

- Participated in several hackathons to create digital games, contributing with programming, project management, design and testing.
- Managed the group's meetings and organization, communicating with the university, scheduling events, distributing tasks internally, and onboarding new members.
- Offered workshops and training on game design and computer science topics, such as Git and AI in games.

Education

Computer Science Major at University of São Paulo (2017-2022)

I have a bachelor's degree in computer science, with focus on Software Development Systems. During my graduation, I worked on several projects, including:

- A computer vision and machine learning oriented robotics simulation, based on MIT's Duckietown project, using Python for image processing and training a Convolutional Neural Network, and Java for the robot's controller.
- A fullstack social networking app for registering and sharing architecture and urbanism media, developed with PHP Laravel and Agile Methodology, along with a Python module for functional testing.
- A Python backend integrated with the Twitch API to play music algorithmically based on user input during a livestream.

Skills and Technologies

- Fluency in English and Brazilian Portuguese, advanced Spanish (C1)
- Python (Pydantic, Pytest, Numpy, and others), Django (DRF, Ninja), Flask, NodeJS, PHP (Laravel), Lua, Java, C, Ruby, Shell Script, Git, Github Actions (CI/CD)
- REST APIs, AWS Services (Lambda, DynamoDB, S3, SQS, SNS, and others), PostgreSQL, MySQL, MongoDB, Neo4j, Elasticsearch
- LLM Integration, Natural Language Processing (NLP), Computer Vision, Objected-Oriented Programming, Complexity Analysis, Agile Methodology, Machine Learning, Descriptive Statistics
